CGCC Program Description

CGCC students can earn an Associate of Science and complete the Computer Science MAPP agreement for transfer to undergraduate programs in Computer Science. All courses are offered at CGCC.

The goal of our program to prepare students to be successful in completing their undergraduate program and ultimately as computer science professionals. Students can expect small classes taught by dedicated faculty in computer labs with the latest technology. In addition to courses that focus on programming and solving computational problems, there is substantial emphasis in mathematics, natural science, and other disciplines. Each semester, students have opportunities to apply their computing knowledge in community outreach, service learning, and other events.

Computer Science Career Opportunities

Computer science professionals design, create, and improve software technologies for a variety of applications. Typical projects include mobile device applications, information and database management, gaming and graphics systems, search engine optimization and development, computing for health care, web development, security analysis, and more.

Computer science professionals are in high demand and command top salaries. Software Developers, Computer Systems Analysts, and Information Security Analysts were all in the top 10 Best Jobs of 2015 by US News and World Report.
